Lab Number:	3
Student Name:	Omkar Bidwai
Roll No :	19

Learning Objective:

- Students will be able to write C++ and java program for using classes and objects.

Learning Outcome:

- Ability to execute a simple C++ and Java program by accepting and displaying values using functions
- Understanding the classes and objects concept in C++ and Java.

Course Outcome:

ECL304.1	Understand object-oriented programming concepts and implement using C++ and Java
-----------------	--

Theory:

Explain about Constructor.

Explain about classes and objects in Java

How to access class attributes and methods? Explain with example **Title:**

4.1 Write a c++ program to Create a class Student with two method getData() and printData().
getData() to get the value from the user and display the data in printData(). Create the two objects
s1 ,s2 to declare and access the values from class StudentTest.

Algorithm:-

Step 1:- Input name, roll no, cgpa, div, branch.

Step 2:- Enter all the getData() condition for inputs.

Step 3:- give value for getData().

Step 4:-Give the data for printData() to grt outpt.

Step 5:- Output.
